

# Homework 1

ECON 380  
UNC Chapel Hill

Name: \_\_\_\_\_

ONYEN: \_\_\_\_\_

This homework is due on **September 2** by **2:15PM**. You must turn in your work on a printed copy of this document in order for it to be graded. Your assignment must be stapled and in the correct order. Non-stapled assignments will automatically receive a 10 point deduction. There are a total of 50 available points.

## The Econ 101 Story (with Algebra)

1. Suppose that the labor supply in a certain market is given by  $Q_S = 25w - 50$  and labor demand is given by  $Q_D = 150 - 10w$ , where  $w$  is the hourly wage rate.
  - (a) If the wage rate is \$4/hour, what is the quantity of labor supplied and demanded? Is this the equilibrium wage? If not, is the equilibrium wage higher or lower than \$4/hour? Explain why. **[4 pts]**
  - (b) If there are no policies in place preventing the market from operating freely, what will be the equilibrium wage and quantity of labor employed in the market? **[4 pts]**
  - (c) Suppose the government imposes a \$7/hour minimum wage on this market. How many workers are employed? Are there any involuntarily unemployed workers? If so, how many? **[3 pts]**

## Labor Force Accounting

1. Determine the labor force status (employed, unemployed, or out of the labor force) of the following individuals. **[2 pts each]**
  - (a) Eddie left his job one year ago. He has not had paid employment in the past year, as he now stays home to take care of his triplets.
  - (b) Josh left a lucrative career as an ice-cream maker six months ago. Since then, he has worked 30 hours per week as an unpaid intern for the Cleveland Browns.
  - (c) Natalie was recently laid-off from her previous position as an executive. She has searched for work actively since her dismissal.
  - (d) Shannon was also laid-off from her previous position as an executive. She decided to retire and has not recently searched for work.
  - (e) Aisling has a PhD in Economics but is unable to find work as an economist. She currently works ten hours per week as a comedian (he is paid).
2. Suppose there are 10,000 individuals over age 16 in Saxapahaw. Of these individuals,
  - 3,000 work full-time in the private sector
  - 1,000 work full-time in the public sector (non-military)
  - 1,000 work part-time in the private sector
  - 1,500 individuals were laid off 6 months ago due to a plant closing. Of these laid off individuals, 800 have actively sought work since being laid off, while 700 searched for work immediately after being laid off, but not in the last four weeks.
  - 1,000 do not have formal employment and instead choose to stay home to care for children
  - 2,500 are retired from work and neither have nor seek employment.

Use this information to answer the following questions. **[2 pts each]**

- (a) How many employed persons are there in Saxapahaw?
- (b) How many unemployed persons are there in Saxapahaw?

- (c) What is the labor force participation rate?
- (d) What is the unemployment rate?
- (e) If we decide to change the definition of unemployment so that we counted all discouraged or marginally attached workers as “unemployed,” what would be the new unemployment rate?

## Unemployment

1. For each of the following, determine which type of unemployment is present: frictional, seasonal, structural, or cyclical. **[2 pts each]**
  - (a) Steve recently moved to Florida because of its warmer climate, but it’s taking him some time finding a new job.
  - (b) A worker repairing VHS players was laid off because most of his customers have started using DVD players.
  - (c) Calebe is entertaining job offers after graduating college. He has received several, but has turned them down because he thinks he can find a firm that better matches his tastes and skills.
  - (d) Peter, a highly skilled construction worker, lost his job when the recession began. He is looking for work, but demand for labor in the construction industry is still low.
  - (e) Surf City U.S.A experiences high unemployment during the winter due to less demand for labor.

## Worker Preferences

Note: This section is intended more as a math review and will be graded for effort.

1. Frank's preferences are represented by the following utility function:  $U(C, L) = 2C^{1/3}L^{2/3}$ .
  - (a) Frank's marginal utility of consumption is  $MU_C = \frac{2L^{2/3}}{3C^{2/3}}$  and his marginal utility of leisure is  $MU_L = \frac{4C^{1/3}}{3L^{1/3}}$ . Determine his marginal rate of substitution between leisure and consumption,  $MRS_{L,C}$ , and simplify your answer where possible. **[3 pts]**
  - (b) Find the equation representing his indifference curve for the utility level  $\bar{U} = 20$ , solved for  $C$ . **[2 pts]**
2. Sweet Dee's preferences are represented by the utility function  $U(C, L) = 4(C^{1/3} + L^{1/3})^3$ .
  - (a) Do Dee's preferences satisfy the property of "strict monotonicity?" Why or why not? **[2 pts]**
  - (b) Find the equation representing her indifference curve for the utility level  $\bar{U} = 100$ , solved for  $C$ . **[2 pts]**
