

Homework 7

ECON 380
UNC Chapel Hill

Name: _____

ONYEN: _____

This homework is due on **November 30** by **2:15PM**. You must turn in your work on a printed copy of this document in order for it to be graded. Your assignment must be stapled and in the correct order. Non-stapled assignments will automatically receive a 10 point deduction. There are a total of 50 available points.

1. A worker with an annual discount rate of 8 percent currently resides in Nigeria and is deciding whether to remain there or move to France. There are three work periods left in the life cycle. If the worker remains in Nigeria, he will earn \$25,000 per year in each of the three periods. If the worker moves to France, he will earn \$32,000 in each of the three periods.
 - (a) What is the net present value of the worker's earning if he chooses to stay in Nigeria? **[4 pts]**
Make sure to write out the entire equation.
 - (b) What is the net present value of the worker's earning if he chooses to move to France? **[4 pts]**
Make sure to write out the entire equation.
 - (c) What is the highest cost of migration that this worker is willing to incur and still make **[4 pts]** the move?

2. Sally just turned 18 years old and is choosing whether to migrate. If she migrates, she will earn a salary of \$50,000 paid at end of each year of work until she retires at age 65 (i.e., at age 19, 20, ..., 64, 65). If she chooses to stay home she will receive \$44,000 each year (also paid at the end of each work year). Her discount rate is $r = 0.10$. Note: You can do this by hand if you really want to, but Excel is your friend here. I will upload a document you can use as a template for doing this in Excel. You don't need to hand in the excel document, you can just write your answer.

(a) What is Sally's net present value of earnings if she chooses to stay home? [5 pts]

(b) What is Sally's net present value of earnings if she chooses to migrate? [5 pts]

(c) What is the highest cost of migration that Sally is willing to incur and still make the move? [3 pts]

3. Suppose that the present value of lifetime earnings of workers who decide to stay at home varies with their skill level and is given by

$$w(s)^h = 20,000 + 500s$$

where s denotes their level of skill and $s \geq 0$. Additionally, the present value of lifetime earnings of a worker who decides to move is given by

$$w(s)^a = 30,000 + 600s$$

(a) If the cost of migration is \$11,500, what is the lowest skill level at which a worker would choose to migrate? [4 pts]

(b) Now, suppose that the net present value of migration costs also varies with skill and is given by [4 pts]

$$C(s) = 19,000 - 500s$$

What is the lowest skill level at which a worker would choose to migrate?

- (c) A cash transfer program is introduced in the country which reduces the cost of migration [4 pts] by relaxing financial constraints. As a result, the net present value of migration costs is now given by

$$C(s) = 16,000 - 500s$$

What is the lowest skill level at which a worker would choose to migrate?

4. (Borjas) Patrick and Rachel live in Seattle. Patrick's net present value of lifetime earnings in Seattle is \$125,000, while Rachel's is \$500,000. The one-time cost of moving to Atlanta is \$25,000 per person. In Atlanta, Patrick's net present value of lifetime earnings would be \$155,000, while Rachel's would be \$510,000.
- (a) If Patrick and Rachel choose where to live based on their joint well-being, will they move [4 pts] to Atlanta?
- (b) Is Patrick a tied mover or a tied stayer or neither? [2 pts]
- (c) Is Rachel a tied mover or a tied stayer or neither? [2 pts]
5. Read the introduction to Borjas (1985). Briefly summarize the findings in Borjas' paper and [5 pts] how they compare to previous studies of migrant wage assimilation. What is a reason Borjas gives as to why previous studies estimated strong assimilation rates?
